

Utah Division of Water Quality
Salt Lake City, Utah

ADDENDUM
Statement of Basis (Wasteload Analysis & TMDL)
Level I Antidegradation Review

Date: July 6, 2009

Facilities: Hiawatha Coal Co. [UT-00139094]
Hiawatha Town Tank – Miller Creek
Moreland Mine Portal
Hiawatha, Utah

Receiving water: Dry Wash, Price Water Drainage

Finding of Insignificant Impact – Negative Declaration

The discharge from the above listed facility was evaluated for impact to its receiving water.

It has been determined that this discharge will not cause a violation of water quality standards (Utah Water Quality Standards, R317-2-3.5.3.b. Utah Administrative Code in downstream receiving waters. Therefore, a wasteload allocation based upon water quality numeric criteria is not required.

Permit limits should be set according to rules found in R-317-1.

Antidegradation Level I Review

An Anti-degradation Level II review is not required since the water quality of the receiving water will not be degraded by the proposed activity (e.g., a discharge to a dry wash where the effluent will not reach a stream or river; or, a UPDES permit is being renewed and the proposed effluent concentration value and pollutant loading is equal to or less than the existing effluent concentrations value and pollutant loading. [R317-2-3.4.1b.1])
